

EDGE8™ Solutions

CORNING

EDGE8™ Solutions Introduction

Corning® ClearCurve® bend-optimized multimode and SMF-28 single-mode optical fibers are the core element of the system ensuring reliability when designing custom-engineered components thanks to its significant reduction in macrobend loss even in the most challenging bend scenarios. This technology enables Corning to provide significantly greater density across the range combined with a simple design and integration for LAN and SAN areas within the data center, while the preterminated components reduce installation times and enable faster moves, adds, and changes (MACs).

Our EDGE8™ solutions were the industry's first preterminated optical cabling systems specifically designed for the data center environment, and the value that EDGE provides to the industry continues to be proven. Density, network uptime, speed, simplicity, and a clear migration path to meet future requirements ... EDGE addresses it all. However, switch and transceiver technology roadmaps clearly indicate that transmission speeds ranging from 1G to 400G will be based on either 2-fiber (Base-2) or 8-fiber (Base-8) connectivity solutions.

That's the motivation behind EDGE8™ solutions. All of the value of our original EDGE solutions, with the added superior network scalability, improved link performance, and 100 percent fiber utilization of a Base-8 design.

EDGE8 solutions strengthen your data center in three key areas:

- increased asset utilization with reduced patch cord complexity and the elimination of stranded cabling assets
- technology adoption due to 100 percent fiber utilization — without the need for conversion modules — improving the link performance while reducing costs
- risk avoidance, providing a simple and clear path to 40G, 100G, and 400G

EDGE8™ HD Housings

EDGE8 HD housings mount in 19-in racks or cabinets and provide industry-leading ultra-high-density connectivity when combined with EDGE8 modules, panels, harnesses, trunks, and patch cords.

The unique design of EDGE8 HD housings include sliding drawers enabling module or panel installation from the front or rear of the housing. Each sliding drawer contains integrated cable routing elements to make real structured patch cord management possible while providing unprecedented finger access without the need for tools or any other accessories. All EDGE8 HD housings come with additional side-routing guides for patch cord integration to the cabinet. The adjustable mounting brackets provide flexible installation options for back-to-back or flush-mounting requirements, and the quick mount feature makes it quick and easy for one person to install the housing with little effort.

The mounting and removal of trunks is a simple, quick, and tool-less operation enabling rapid deployment of high-fiber-count trunks for faster moves, adds, and changes (MACs).

Labeling the housing couldn't be easier with a full-size mounting area on the inside of the front door for the display of clear and concise information. The easily installable trunk mounting plate provides flexibility depending on your design (e.g. back-to-back) or application (e.g. reduced depth) concept.

EDGE8™ Solutions

CORNING

Features and Benefits

6-slot sliding drawers

Allow unprecedented finger access, easier patch cord/harness routing, and port identification

Quick mounting system

Enables one-person installation and depth adjustment of the housing in the rack

Integrated strain-relief plate can rotate 90 degrees

Makes it possible to install trunks through side or rear cable entry points

Removable top covers on the 1 U and 2 U housings

Provides easier access to modules and panels

Total flexibility in the same HD housing

- Accepts EDGE8™ modules
- Accepts EDGE8 port breakout modules
- Accepts EDGE8 1x, 2x, and 4x MTP® adapter panels
- Accepts EDGE8 port tap modules

High port concentration with LC Duplex and MTP Base-8 system

- 1 U EDGE8 Housing EDGE8-01U
 - 48x LC Duplex ports (96 fiber)
 - 48x MTP ports (384 fiber)
- 1 U EDGE8 Housing EDGE8-01U-SP
 - 72x LC Duplex ports (144 fiber)
 - 72x MTP ports (576 fiber)
- 2 U EDGE8 Housing EDGE8-02U
 - 144x LC Duplex ports (288 fiber)
 - 144x MTP ports (1152 fiber)
- 4 U EDGE8 Housing EDGE8-04U
 - 288x LC Duplex ports (576 fiber)
 - 288x MTP ports (2304 fiber)

Ordering Information

Part Number	Height Unit	Dimensions (W x D x H)	Packaging Dimensions (W x D x H)	Shipping Weight	Number of Panels per Housing
EDGE8-01U	1U	432 mm x 561 mm x 44 mm (17 in x 22.1 in x 1.75 in)	584 mm x 673 mm x 191 mm (23 in x 26.5 in x 7.5 in)	6.8 kg (15 lb)	12
EDGE8-01U-SP	1U	432 mm x 561 mm x 44 mm (17.0 in x 22.1 in x 1.75 in)	581 mm x 667 mm x 197 mm (22.9 in x 26.25 in x 7.75 in)	8.2 kg (18 lb)	18
EDGE8-02U	2U	432 mm x 561 mm x 88 mm (17.0 in x 22.1 in x 3.5 in)	578 mm x 667 mm x 241 mm (22.75 in x 26.25 in x 9.5 in)	10.4 kg (23 lb)	36
EDGE8-04U	4U	432 mm x 561 mm x 177 mm (17.0 in x 22.1 in x 7.0 in)	578 mm x 667 mm x 327 mm (22.75 in x 26.25 in x 12.9 in)	16.5 kg (36 lb)	72

Note: When rear strain-relief plate is removed from part number EDGE8-01U-SP, product depth reduces to 14.9 in.

EDGE8™ Trunks

EDGE8 MTP® trunks are preterminated cables with ultra-low-loss 8-fiber MTP connectors on both ends. The trunks build up the major backbone of the passive network infrastructure, and enable rapid deployment for your campus LAN or data center facility. All trunks are shipped with strain-relief clips that allow for tool-less installation in both EDGE8 solutions and Plug & Play™ systems housings. These trunks conform to TIA-568 Type-B polarity.

EDGE8™ MTP® Trunks

EDGE8 MTP trunks utilize an 8-fiber push/pull optical connector that is pinned on both ends of the cable. These trunks are designed to interface with the EDGE8 universal modules or adapter panels for parallel optic applications. The trunks are shipped with strain-relief clips that allow for tool-less installation in EDGE8 housings. The grip can be pulled using up to 100 lbs of pulling tension while providing complete protection for the connectors.

Features

- Low-loss connectivity enables system design flexibility
- Enabled by bend-insensitive Corning® multimode or single-mode fibers
- Features slim round 8-fiber legs
- Tool-less installation with EDGE™ mounting clips

EDGE8™ MTP® Extender Trunks

EDGE8 MTP extender trunks provide additional distance for the backbone of the EDGE8 solution. With a non-pinned MTP connector on one end of the cable, a pinned MTP connector on the other end, and a TIA-568 Type-A polarity, these trunks are designed to interface with an EDGE8 solutions universal module and an EDGE8 MTP trunk. All trunks are shipped with strain-relief clips that allow for the tool-less installation in EDGE8 solutions systems housings. MTP extender trunks are most often used in a Zone Distribution Area (ZDA).

Features

EDGE8™ Adapter Panels, MTP®

EDGE8 MTP® adapter panels are pass-through panels that provide a simple interface to mate MTP connectors. This occurs when connecting MTP trunks to MTP extended trunks, MTP trunks to trunk harnesses, and in 40G multimode networks, connecting MTP trunks to 40G patch cords. The backbone trunks connect at the rear of the adapters and then various connection options are possible at the front using end-to-end links such as MTP harnesses, MTP trunks to 40G patch cords (and in 40G multimode networks), etc. The MTP adapter panel is the easiest way to implement parallel optic applications in your data center while retaining the existing hardware.

All EDGE8 adapter panels can be installed from the front or rear of any EDGE8 hardware using a simple release mechanism thereby eliminating the need for any tools. EDGE8 MTP adapter panels are available with one, two and four 8-fiber adapters for multimode and single-mode applications. All panels feature unique shuttered MTP reversible adapters at the front of the panel for on-site changes to manage field polarity, and visual fault locator (VFL) compatible shutters that enable easy port identification while defusing the VFL light to ensure adequate eye safety.

Features

- Provide MTP connection points between trunks, harnesses, and patch cords
- Can be installed or removed from the front or rear of a housing
- MTP adapter panels facilitate simple upgrades to parallel optics
- Enable pay-as-you-grow approach
- Packaged in easy-open containers
- Translucent shutters diffuse VFL light and eliminating the need for dust caps

EDGE8™ Harness

One of the critical challenges facing data center owners, operators, and maintenance personnel in high-density (HD) computing areas is how to provide high-port-concentration deployments to support the latest generation of high-speed switches without losing them under a mass of patch cords.

An EDGE8 harness is an ultra-slim 8-fiber (2.0 mm) pre-terminated fiber cable with an MTP® connector on one end and four LC Duplex connectors on the other. The majority of the harness is a single cable which breaks out into four, 2-fiber legs to enable connectivity to the switch ports which are staggered to replicate the specific switch ports to save on excess cable length.

Specially designed harnesses are available for numerous distribution switches including Cisco, Arista, Brocade, Juniper and HP using SFP+ (LC interfaces) for Ethernet or Fiber Channel with duplex transmission for port mirroring, aggregation, fabric, or break-out applications.

Features

- Slim round 2-fiber interconnect cable
- Uniboot style duplex connectors
- Low-loss connectivity enables system design flexibility
- Designed to withstand tight bends and challenging cable routes

EDGE8™ Modules

EDGE8 modules provide the interface between the MTP® connector on the trunk and the LC duplex patch cords that will then connect directly into the electronics or as a cross-connect in the main distribution area (MDA).

All EDGE8 modules can be installed from the front or the rear of any EDGE8 Solutions housing using a simple release mechanism eliminating the need for any tools. LC Duplex adapters feature hinged shutters that move up and out of the way when the connector is inserted. Specially designed indents in the shutters ensure that the end faces of the connectors are never touched. These shutters replace the standard dust caps that are typically never replaced once removed, thereby exposing the interior end faces to dust particles and possible damage. In addition, the shutters are visual fault locator (VFL) compatible to allow easy port identification while diffusing the VFL light to ensure adequate eye safety.

EDGE8™ MTP® to LC Duplex Module

EDGE8 modules provide an interface between 8-fiber MTP connectors and LC duplex connectors. The internal wiring of the module based on universal polarity ensures the correct fiber polarity throughout the entire system independent of how many modules are implemented within the link. Ultra low-loss connectivity enables design flexibility to permit multiple potential connections within the system (e.g. 6-module link).

Features

- Breaks out 8-fiber MTP terminations from the rear into 4x LC duplex connectivity at the front
- Ultra-low-loss connectivity of 0.35 d/B enables system design flexibility
- Internal wiring (universal polarity) ensures correct fiber polarity throughout the system
- Features LC duplex adapters with translucent inward-folding shutters which:
 - provide reliable dust protection without the need for dust caps
 - allow fiber identification with visual fault locator (VFL)
 - diffuse VFL light for eye safety
- Easily swappable with MTP panels to:
 - accommodate changing requirements while leaving trunk cable infrastructure in place
 - migrate to MTP ports for parallel optics
- Packaged in easy-open containers

EDGE™ Base-8 MTP® to LC Duplex Module

The 8-fiber MTP® to LC Duplex module is a solution that is well suited for customers that want to migrate to an 8-fiber solution while still utilizing an existing EDGE footprint.

Features

- Breaks out 8-fiber MTP terminations from the rear into 4x LC duplex connectivity at the front
- Ultra-low-loss connectivity of 0.35 d/B enables system design flexibility
- Easy integration into existing EDGE (Base-12) Housings or Hardware
- Internal wiring (universal polarity) ensures correct fiber polarity throughout the system
- Features LC duplex adapters with translucent inward-folding shutters which:
 - provide reliable dust protection without the need for dust caps
 - allow fiber identification with visual fault locator (VFL)
 - diffuse VFL light for eye safety
- Easily swappable with MTP panels to:
 - accommodate changing requirements while leaving trunk cable infrastructure in place
 - migrate to MTP ports for parallel optics
- Packaged in easy-open containers

EDGE8™ Port Breakout Module

EDGE8 MTP® port breakout modules enable conversion from a single 4-channel parallel optic port (such as 40GSR4 (QSFP)), to a patch panel representation with four LC duplex ports for use in a main distribution area.

Typically, the MTP tail will connect to the active electronics and break out the 8-fiber QSFP 40G transceiver into 4x 2-fiber 10G LC duplex connections.

Features

- Breaks out 8-fiber MTP terminations from the rear into 4x LC duplex connectivity at the front
- Ultra-low-loss connectivity of 0.35 dB enables system design flexibility
- Internal wiring (universal polarity) ensures correct fiber polarity throughout the system
- Features LC duplex adapters with translucent inward-folding shutters which:

EDGE8™ Tap Modules

EDGE8 tap modules enable passive optical tapping of the network while reducing downtime and link loss, and increase rack space utilization and density compared to other optical tap options.

Unlike other passive optical tap solutions that must be added as separate devices in the network link, the EDGE8 tap modules integrate the coupler technology for passive optical tapping into a structured cabling component – the module. Monitored ports can be added without disrupting the system's live traffic, and insertion loss in the link is reduced by the integration of the passive optical tapping into the module.

EDGE8 tap modules use an advanced splitter technology for multimode to reduce insertion loss compared to traditional splitter technology.

EDGE8 tap modules enable up to 72 monitor links per one rack unit (1RU), and they fit seamlessly into EDGE8 Solutions hardware for maximum cable management and better utilization of rack space.

EDGE8 Tap Modules - MTP to MTP; MTP to LC; LC to LC
| Photo REN1535, REN1527, REN1519

EDGE8™ MTP® to MTP Tap Modules

EDGE8 MTP to MTP tap modules provide an MTP interface at the front of the tap module which can be used with a harness for LC breakout applications, or with MTP patch cords for parallel optic applications. The MTP monitoring port can be located at the front or rear of the tap module.

The front-of-module configuration has pinless "Tap" (red) and pinned "Live" (aqua for multimode, black for single-mode) MTP adapters on the front of the tap module and a pinless "Live" (aqua for multimode, black for single-mode) MTP adapter on the rear of the tap module. This configuration enables simple patch management of the monitoring links via the patching zone at the front of the rack.

The back-of-module configuration has a pinned "Live" MTP adapter (aqua for multimode; black for single-mode) on the front of the module and pinless "Live" (aqua for multimode; black for single-mode) and "Tap" (red) MTP adapters on the rear of the module. This allows for remote monitoring away from the main data center infrastructure.

Reverse Polarity Uniboot Duplex Patch Cords

EDGE™ Reverse Polarity Uniboot Duplex Patch Cords allow for the quick and easy conversion from a TIA-568 A-B polarity to a TIA-568 A-A polarity without exposing the fibers or needing any tools. This patch cord comes with a straight-through polarity from the factory, but you can convert it to a flipped patch cord with no tools. This uniboot design allows one cable to carry both fibers, reducing patch cord bulk when routing.
